## EDUCATION

---

08/2020 - Present	<b>Bachelor of Science, Computer Science</b> California State University of Fullerton
08/2016 - 05/2020	<b>Saddleback College</b> Completed lower division classes for transfer

## SKILLS

---

<i>Languages</i> <ul style="list-style-type: none"><li>• C/C++</li><li>• Python</li><li>• HTML/CSS</li><li>• Javascript</li><li>• SQL</li></ul>	<i>Operating Systems/Technologies</i> <ul style="list-style-type: none"><li>• Windows</li><li>• Linux/Unix</li><li>• Visual Studio &amp; Code</li><li>• Trello &amp; Jira (Agile/Scrum)</li><li>• Git &amp; GitHub</li></ul>	<i>Relevant Completed Coursework</i> <ul style="list-style-type: none"><li>• Algorithm Engineering</li><li>• Software Testing</li><li>• Operating System Concepts</li><li>• Software Engineering</li><li>• Web Front-End Development</li></ul>
---	--	--

## EXPERIENCE

---

06/2022 - Present	<b>Peer Research Mentor</b> , Cal State Fullerton ASC - Fullerton, CA <ul style="list-style-type: none"><li>• Mentoring and assisting transfer students with their independent research as part of an 8-week summer program to allow students to gain first hand experience into scientific research.</li><li>• Managing a team of students in a dynamic and collaborative research environment while also providing training and support.</li><li>• Taught and mentored on the basics of Python, object-oriented programming, SEIR modeling and the Mesa framework for Python.</li></ul>
02/2022 - 06/2022	<b>Research Assistant</b> , Cal State Fullerton - Fullerton, CA <ul style="list-style-type: none"><li>• Formulated and designed a hybrid model consisting of agent-based simulations and equation-based modeling to simulate Lassa Fever.</li><li>• Developing and quantifying different scenarios and constraints on the model to simulate different outbreak prevention/control methods to note in our findings.</li><li>• Writing a research paper and research poster to present our conclusion and findings at TAPIA Conference 2022 on the best environmental intervention strategies for the control of lassa fever outbreaks.</li></ul>

## PROJECTS

---

04/2022 - Present	<b>Agent-Based Lassa Fever Model</b> , (Python and Mesa Framework) <ul style="list-style-type: none"><li>• Agent-Based Model designed, developed and tested using the Python framework MESA which serves the purpose of modeling Lassa Fever so it can be given a proper spatiotemporal analysis of different control measures for outbreaks.</li><li>• Uses equation-based formulas within the model/code to accurately portray the different groups of agents within the model.</li><li>• Modularized the code into separate/different agent classes for a more accessible approach to implement future features and scenarios.</li></ul>
09/2021 - 11/2021	<b>Who Would Win?</b> , (JS, JSX markup, HTML5/CSS3) <ul style="list-style-type: none"><li>• Online interactive web application that lets users vote on various match-ups versus their favorite characters from numerous sources of entertainment and media.</li><li>• Matchups are randomly selected from our Google Firestore database that gives functionality to the application.</li></ul>
